

4 Symptoms of a Heart Problem 心臟病發的徵狀

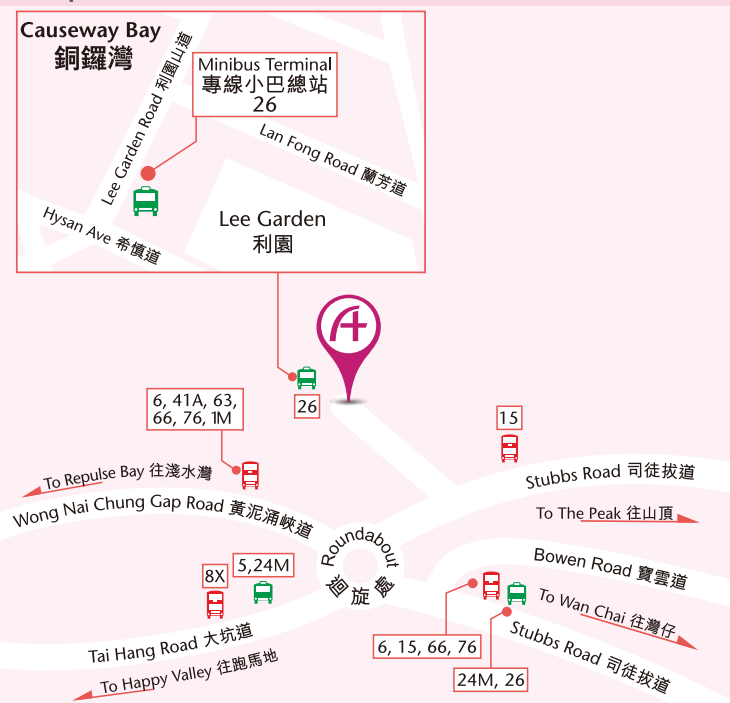

If you experience symptoms of a heart problem, you should immediately seek advice from doctors for early and effective intervention. Some common symptoms of heart problems include:

- + Undue fatigue after exertion
- + Rapid, strong, and irregular heartbeat
- + Sense of weakness and being unsteady on your feet
- + Shortness of breath during exercise or when lying down
- + Pain or pressure in the chest; pain, numbness, or pressure in one or both arms; pain in the lower jaw or throat

以下是一些較常見的徵狀，若有類似以下情況，心臟可能已響起警號，應尋儘早求醫，以免錯失治療時機。

- + 用力後過度疲勞
- + 急促、強力而不規則的心跳
- + 感到虛弱及腳步虛浮
- + 運動或躺臥時感到氣促
- + 感到胸部疼痛、不適或壓迫；一隻或兩隻手臂感疼痛、緊迫或麻痺；甚至下顎或喉部疼痛。

4 Your Professional Medical Team 我們的專業醫護團隊

Coronary artery disease (CAD), also called coronary heart disease, is the most common type of heart disease and the second-leading cause of death in Hong Kong. Unfortunately, many people with coronary heart disease are not aware of their condition until severe symptoms surface or an attack arises, which may result in sudden death.

To combat heart disease, Hong Kong Adventist Hospital – Stubbs Road strives to promote the benefits of a healthy lifestyle to the public to reduce the risk of disease. The hospital also provides individual cardiac assessments to help patients identify their risk factors of coronary heart disease so that our specialists are able to formulate a personalized prevention strategy.

冠心病，或稱冠狀動脈心臟病，是本港最常見的嚴重心臟病，是繼癌症後的第二大殺手。大部份患者都沒有明顯病徵，一旦發作卻有機會致命。

故此，除了鼓勵大眾保持良好生活習慣，以減低患病風險，香港港安醫院—司徒拔道還提供心臟健康評估，助你及早識別潛藏危機，針對性地預防心臟病發。

4 What is Coronary Artery Disease? 甚麼是冠心病？

A heart attack, also known as myocardial infarction (MI) or coronary thrombosis, develops when the arteries supplying blood to the heart muscle become narrowed or blocked, resulting in part of the muscle not receiving enough oxygenated blood. Heart attacks can be life-threatening, and symptoms may include chest tightness and dyspnea among others.

The most common cause of heart disease is atherosclerosis, which is the result of a build-up of fatty deposits (plaque) on the walls of an artery over many years. This in turn causes the artery to narrow, resulting in reduction of blood flow.

冠心病又稱「心肌梗塞」或「冠狀動脈血栓」，指負責供應心肌血液的動脈（冠狀動脈）狹窄或阻塞，前往心臟的血液暫停流動，導致部份心肌缺血受損，可能會出現胸口劇痛和感到氣促等病徵，嚴重者甚至致命。其最常見的成因是冠狀動脈粥樣硬化，即不正常的油脂組織（斑塊）積存在血管壁，令血管變窄，阻礙血液流動。

4 Uncover the Risk Factors of Coronary Artery Disease 找出潛藏的冠心病危機

Prevention is key to combating coronary artery disease. First and foremost, it is of utmost importance to maintain a healthy lifestyle, which keeps your heart and blood vessels healthy. The next step is to undergo a cardiac assessment, particularly for those at higher risk. Cardiac assessments can reveal hidden problems by:

- + Analyzing various risk factors through assessment of blood lipid and sugar levels, blood pressure, body mass index, and waist index.
- + Examining the condition of the heart and blood vessels through the use of technologically advanced tests such as exercise stress tests with electrocardiograph, echocardiograms, and carotid ultrasounds.

Based on the results of blood tests and other examinations, our cardiologists will analyze and assess your cardiac condition and provide personalized medical advice for you to control and prevent coronary heart disease.

要對付冠心病，預防往往勝於治療；一方面要有良好生活習慣，保持心血管健康，另一方面應定期進行心臟檢查，因為心血管問題不一定可以從表徵得知，所以需要深入的醫療檢查才能發現：

- + 了解血脂、血糖和血壓水平，加上體質指數和腰圍分析，有助了解風險因素；
- + 適當地利用先進儀器，如運動心電圖、超聲心動圖和頸動脈超聲波，有助了解心臟和血管狀況。

本院的心臟專科醫生會結合驗血報告和各項檢查結果，深入檢查潛在的心臟和血管問題，繼而仔細評估冠心病的風險，及提出個人化的建議，幫助大家更有效地控制和預防心臟病發作。

4 Should I Undergo an Assessment? 誰需要檢查？

Although there is no single direct cause for coronary artery disease, some risk factors include:

雖然冠心病沒有絕對的單一成因，但以下風險因素會增加患病機會：

- + Gender (male): men are at a greater risk
- + Advanced age
- + Family history of heart disease, diabetes, or hypertension
- + Smoking
- + High blood cholesterol
- + Low level of physical activity
- + Stress
- + High blood pressure (hypertension)
- + Being overweight
- + Diabetes

These risk factors are associated with certain cardiovascular problems that may trigger a heart attack. If you have any of the above risk factors, it is recommended that you receive regular check-ups.

- + 男性
- + 年長
- + 家族有心臟病、糖尿病或高血壓病史
- + 吸煙
- + 高膽固醇
- + 缺乏運動
- + 憂慮或精神緊張
- + 高血壓
- + 過重
- + 糖尿病

這些風險因素可能會引致或加劇一些心血管問題，進而觸發冠心病。如有一項或以上的風險因素，建議定期進行心臟檢查，找出隱藏危機。
